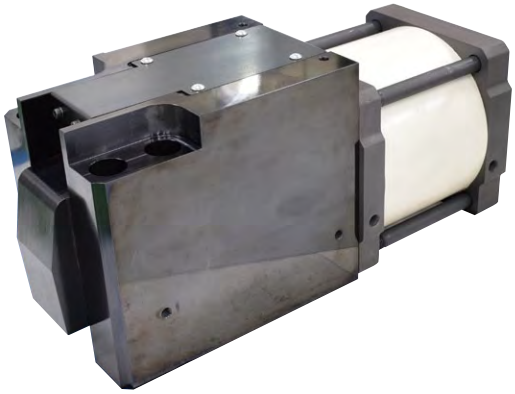
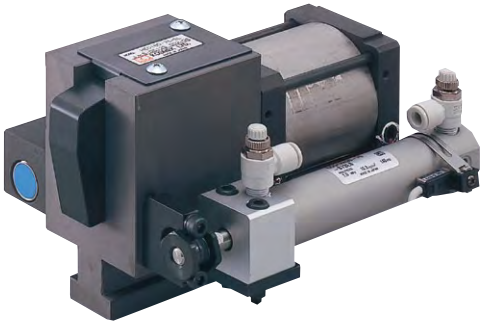
QMCS
QUICK MOLD CHANGE SYSTEMS

Air Clamp System H Series

A Variety of Air Clamps for Small to Extra-Large IMMs. Suitable for Clean Environment.



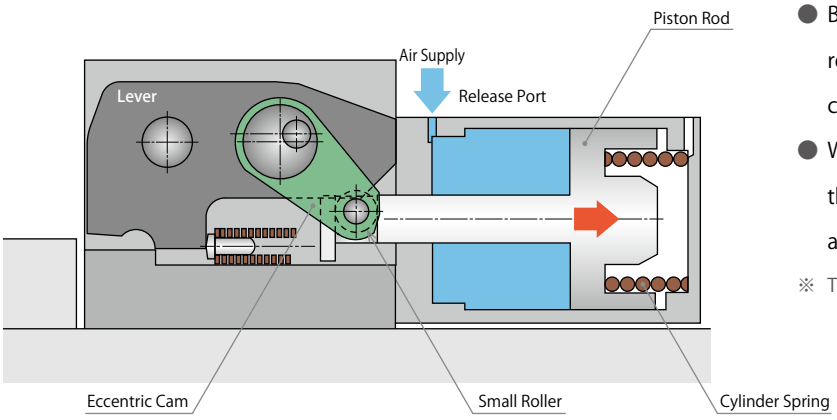


KOSMEK
Harmony in Innovation

Features and Action Description

- Power source is general compressed air only.
- Air clamp system eliminates the possibility of contamination around the clamp due to oil leakage or dripping.
- Piping work is easy because the circuit consists of air lines.
- Fire hazard by use/or storage of hydraulic oil is eliminated.
- Excellent for electric machines, no hydraulic source is required.
- Maintenance is easy as there is no oil mess.
- This system is interchangeable with our hydraulic clamp (model GWA) as the mounting bolt pitch is identical.
- Endurance at high temperature is improved because the working pressure of this system is lower than that of the hydraulic model.
- Overall system costs are less than hydraulic systems.

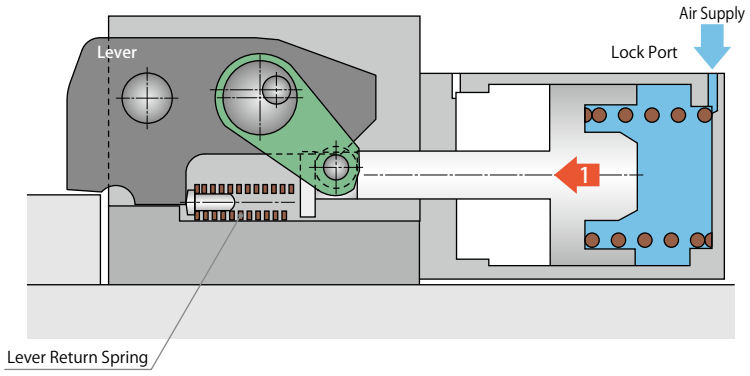
Lever Retracted



- By supplying 0.4 MPa air pressure to the release port, the piston rod moves backward compressing the cylinder spring.
- With the movement of the piston rod, the lever is moved backward by the small roller and eccentric cam. The lever is set inside the body.

※ The lever of HB/HE clamp cannot be set inside the body.

Lever Extended

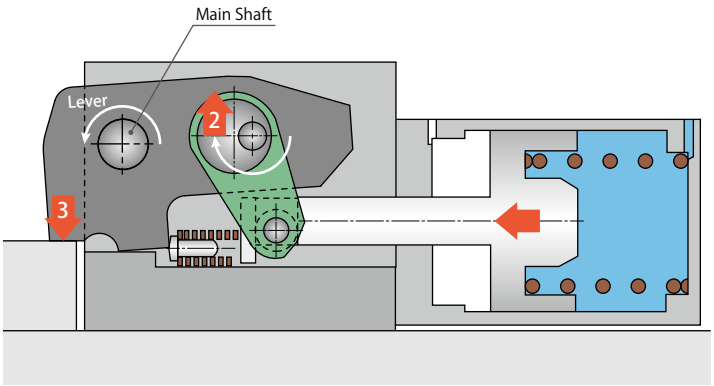


① By releasing the air supply to the release port and supplying air to the lock port, the piston rod is moved forward with air pressure and cylinder spring force. The lever return spring movement 1 keeps the lever moving forward in a horizontal state.

② With the movement of the piston rod, small roller, eccentric cam and lever move forward.

※ The lever is moved forward with the cylinder spring force by releasing the air supply from the release port.

Lever Locked



③ The piston rod moves forward and rotates the eccentric cam, which is connected by the small roller.

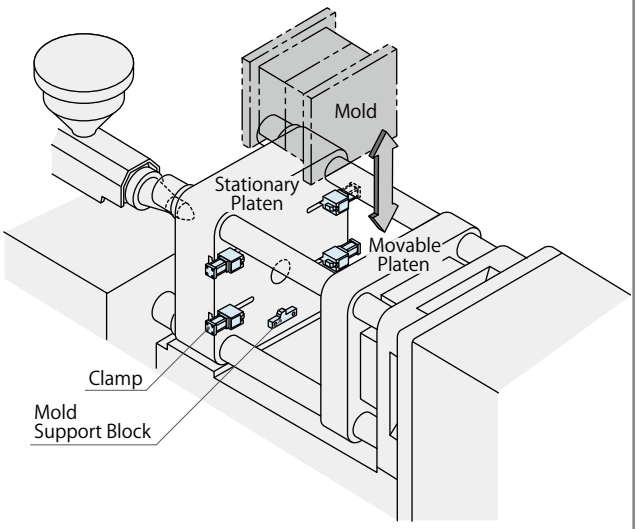
④ With the rotation of the eccentric cam, thrust is applied in the direction of 2.

⑤ Rotational force, with the main shaft as the center, is generated in the lever.

⑥ With the main shaft as the support point, clamping force (which is boosted by the leverage of the lever) securely clamps the mold 3.

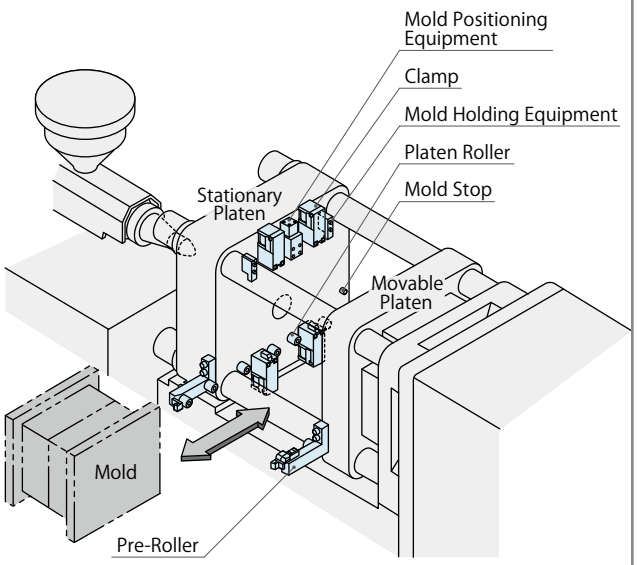
Mold Change System

Vertical Mold Change System



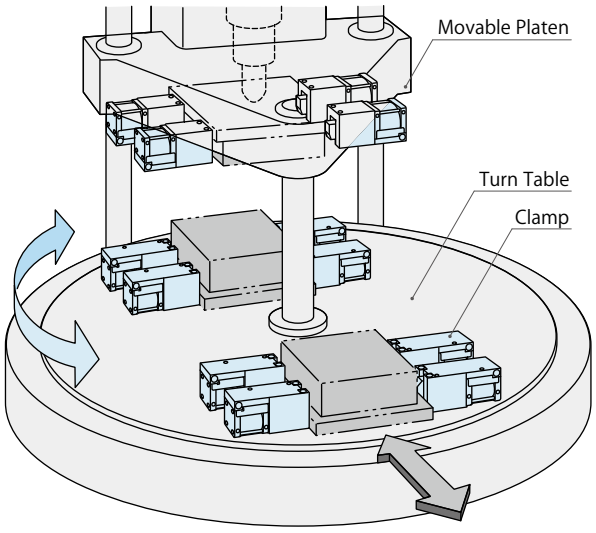
Vertical mold change system is a method for changing a mold using a crane over a molding machine and for securely fastening the mold by a powered clamp. T-slot clamp (model HB/HE) or bolt fixed clamp (model HC) can be selected depending on the conditions of the mold and the molding machine.

Horizontal Mold Change System



Horizontal mold change system is a method for changing molds from the operation side or the non operation side using a mold change cart or a stand.
Most suitable configuration can be selected based on the frequency of the mold change or the plant layout.

Vertical Injection Molding Machine



Air clamp (H series) is most suitable for vertical IMMs. Especially for a turn table machine, the lower molding surface always passes under the upper clamp in each shot due to the IMM mechanism. At this time, even a slight amount of oil dripping from clamps or piping results in not only contaminants of molds but production of defective molded parts. Air clamp uses no oil, thus eliminating a chance of contamination.

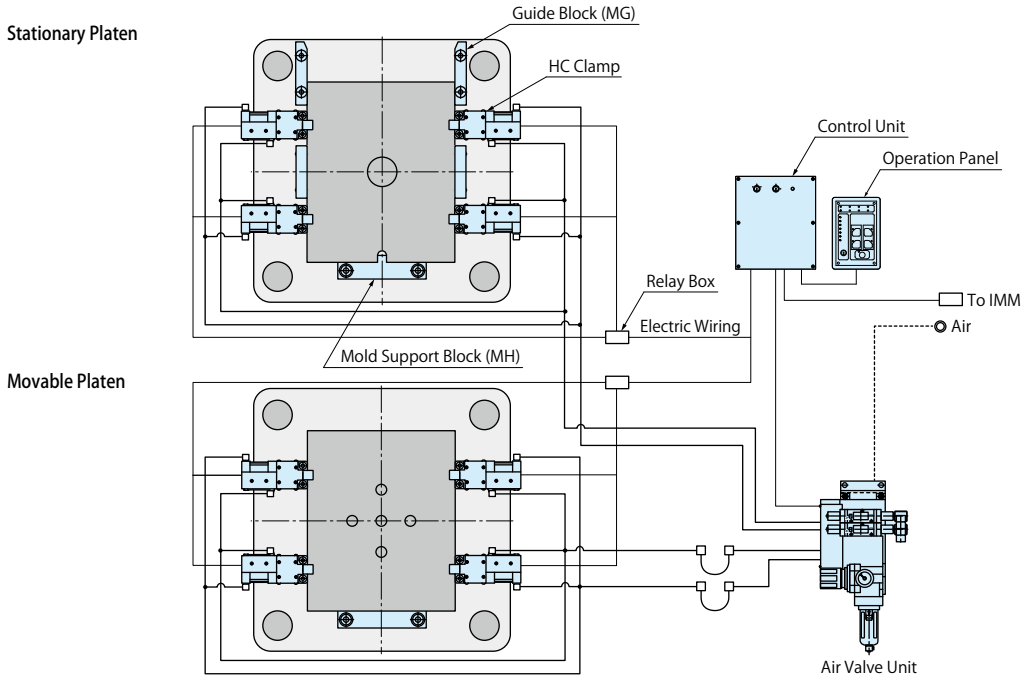
Cautions on System Operation

- Check the condition of IMMs and molds before mold change and make sure to suspend a mold with a crane till completing mold change. Otherwise, a mold may drop and cause an injury.
- When working on a mold while still in the machine, suspend the mold with crane or fasten it with bolts and turn the machine power supply OFF.
  Failure to do so may result in mold dropping and personal injury.
- When production is completed, close the mold in the machine or remove it from the machine. Failure to do so may result in mold dropping and personal injury.
- Do not remove the mold support block or stop block from the stationary or movable platens.
  The removal may result in mold dropping and personal injury.
  Note) When the stationary side is equipped with a location ring, install the dropping preventive block only on the movable side.
- When changing a mold, do not enter or put your hand/foot under the mold. It may drop and cause an injury.
- Use specified molds only.
  Failure to do so may result in insufficient locking of a mold, mold dropping and personal injury.
- Operate within the specified condition.
  Failure to do so may result in breakage of a machine, mold dropping and personal injury. Also this may cause malfunction of a clamp.

Vertical Loading Mold Change System

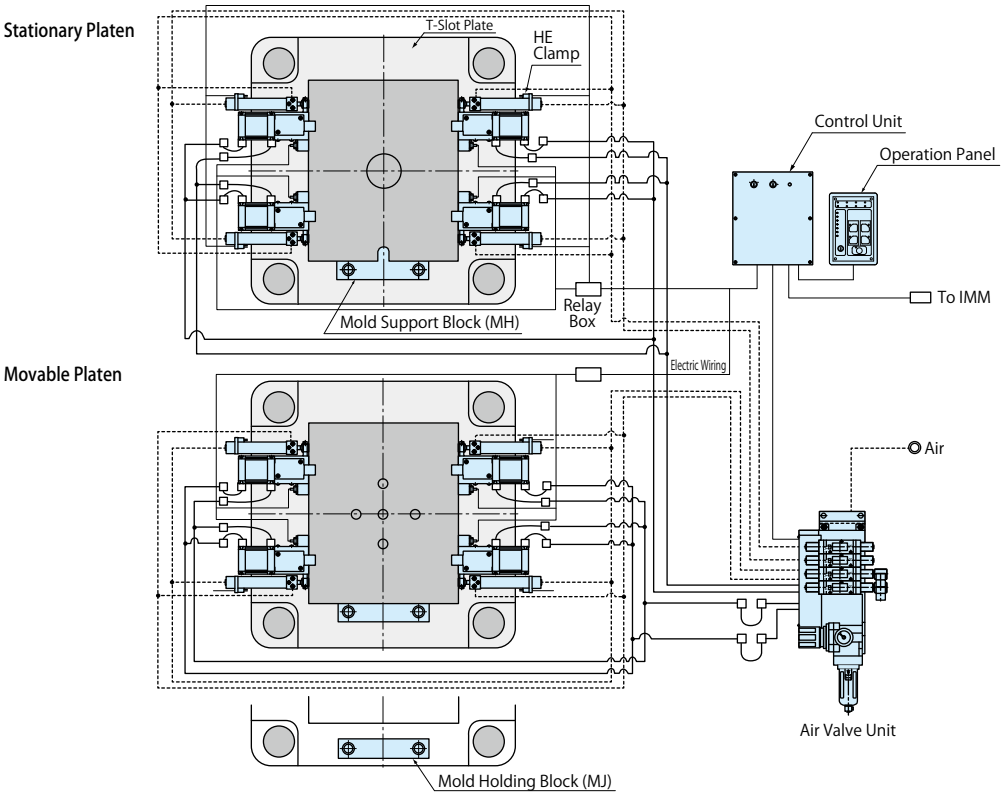
For Molds with Standardized Width

model **HC**



Needs to Standardize Mold Dimension

model **HB / HE**



Standard System (HC / HB / HE)

Notes:

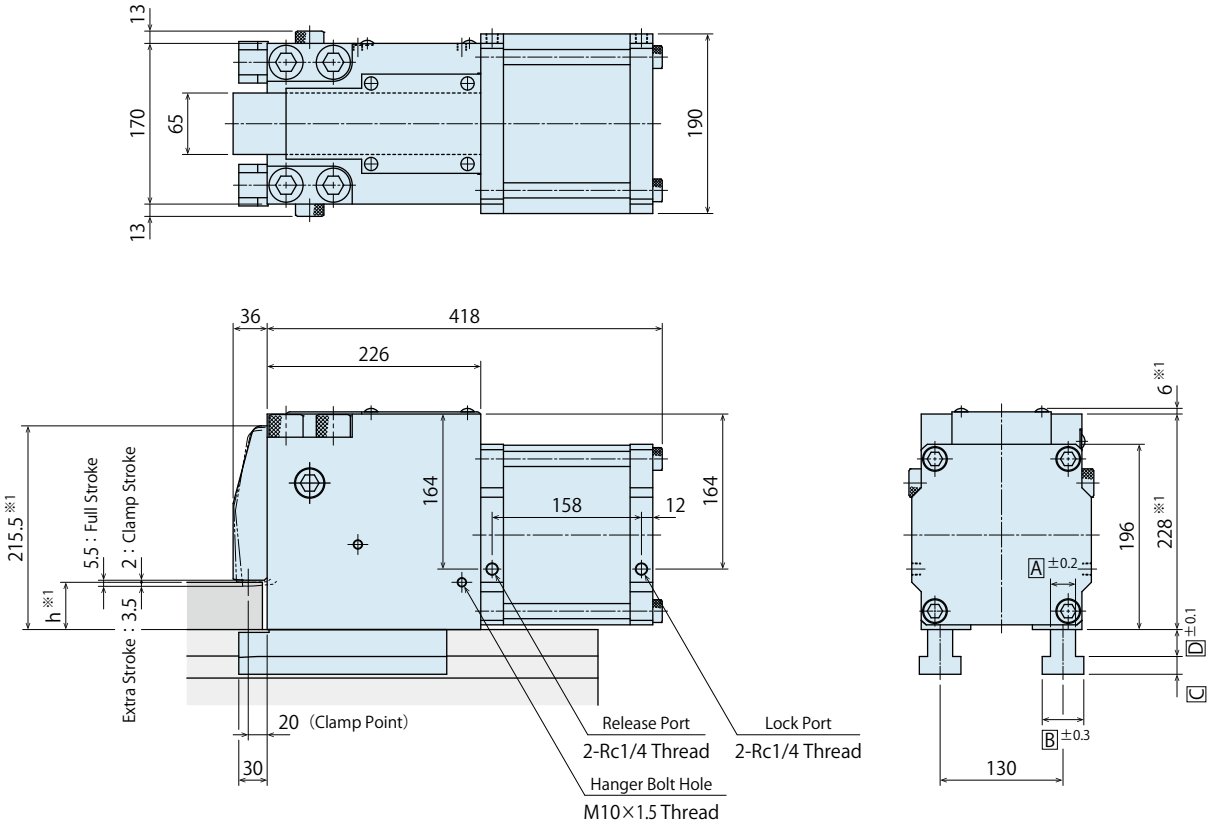
1. [A][B][C][D] dimensions are determined by Kosmek according to the T-slot dimensions.
2. When making an order, please specify a, b, c, d dimension of T-slot and h dimensions of mold clamping thickness in 0.1mm increments.
3. Tolerance of dimension d of T-slot should be better than ±0.2mm.
4. The accuracy of the mold clamping thickness (h dimension) should be within ±0.3mm.
5. Dimension E is kept constant and dimension M is changed to deal with the specified mold thickness (dimension h).
   If dimension E cannot be increased because of interference due to minimum mold thickness limitation, contact us.
6. Please contact us for unlisted specifications and dimensions.

External Dimensions

※ This drawing shows HB2500 standard model.
Contact us for external dimensions for options.



(mm)

Model No.		HB2500
Mold	min. h	$50^{\pm 0.3}$
	max. h	$90^{\pm 0.3}$

Notes:

※1. Overall height of the clamp（228mm+6mm）is kept constant and the lver thickness is changed to deal with the specified mold thickness (dimension h). Please contact us if the overall height of the clamp cannot be increased due to the interference of the minimum mold thickness limitation.

1. Do not exceed the clamp's capacity.
2. Specifications/Contents in this catalog are subject to change without prior notice. Ask for the approval drawing before deciding to purchase.
3. A B C D dimensions are determined by Kosmek according to the T-slot dimensions.
4. When making an order, please specify a,b,c,d dimension of T-slot and h dimensions of mold clamping thickness in 0.1mm increments.
5. Tolerance of dimension d of T-slot should be better than ±0.2mm.
6. The accuracy of the mold clamping thickness (h dimension) should be within ±0.3mm.
7. Please contact us for unlisted specifications and dimensions.

MEMO

Model No. Indication

HE 040 2 - 125 - 5 L - H - T□□□

1 2 3 4 5 6 7

1 Clamping Capacity

010: Clamping Capacity = 10kN
016: Clamping Capacity = 16kN
025: Clamping Capacity = 25kN
040: Clamping Capacity = 40kN
063: Clamping Capacity = 63kN
100: Clamping Capacity = 100kN
160: Clamping Capacity = 160kN
250: Clamping Capacity = 250kN

2 Design No.

0 : Revision Number (1 Clamping Capacity・・・250)
1 : Revision Number (1 Clamping Capacity・・・010 / 016)
2 : Revision Number (1 Clamping Capacity・・・025 / 040 / 063 / 100 / 160)

3 Slide Stroke (Air Cylinder Stroke)

25 : Clamp Travel Distance = 25mm
〜
300 : Clamp Travel Distance = 300mm

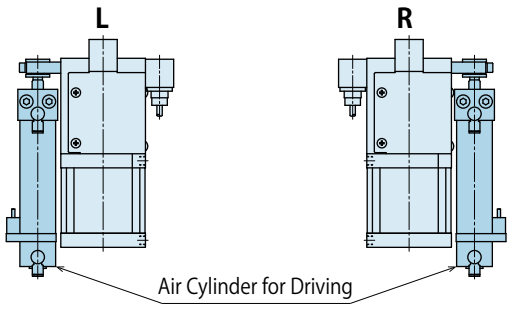
※ Selectable 3 Slide Stroke Length differs according to 1 Clamping Force.
Please refer to the slide stroke on specifications.
※ Extra distance should be considered when determining the travel distance.

4 Switch Load Voltage (Current)

1 : AC100V
2 : AC200V
5 : DC24V (5〜40mA)

5 Air Cylinder Mounting Position

L : Left (Left Side as Seen from Clamp Back Side)
R : Right (Right Side as Seen from Clamp Back Side)



6 Option

Blank : Standard
H : Extra Height (When h dimension is more than max. h in the external drawing.)
J : Low Lever (When h dimension is less than min. h in the external drawing.)
Q : Double Cylinder
S : Special Spacer ※1
V : High Temperature (0~120℃)

Note:
※1. Only available for 1 Clamping Capacity : **010** 〜 **160**.
1. Not all combinations of options are available.

7 Production Number

This number represents the main specification of the clamp's T-slot stem and the clamping height.
After the specification is confirmed, we will create a number.

Usable Fluid			Dry Air							
Operating Temperature ※5 ℃			0~70 (V：High temperature type is available for 0~120℃)							
Use Frequency ※6			Max. 20 Cycles / Day							

Notes:

※2. Do not exceed the clamp's capacity.

※3. To maintain the released state, supply 0.4MPa or more in air pressure to the release port.

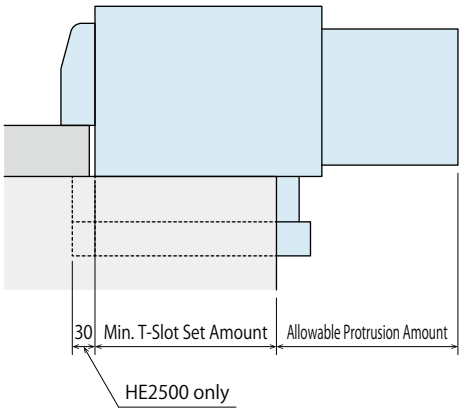
※4. There is ±10% variation in holding force and clamping force.

※5. Option **V**: High Temperature (0~120℃) is for operating in temperature 70℃ or more.

※6. Please contact us for more frequent use.

1. The accuracy of the mold clamping thickness (h dimension) should be within ±0.3mm.
2. Please contact us for unlisted specifications and dimensions.

HE Clamp Allowable Protrusion Amount



(mm)

Model No.	Min. T-Slot Set Amount	Allowable Protrusion Amount
HE0101	40.5	108
HE0161	49	113
HE0252	59	122.5
HE0402	73.5	127.5
HE0632	111.5	124.5
HE1002	133	133.5
HE1602	170.5	167
HE2500	226	192

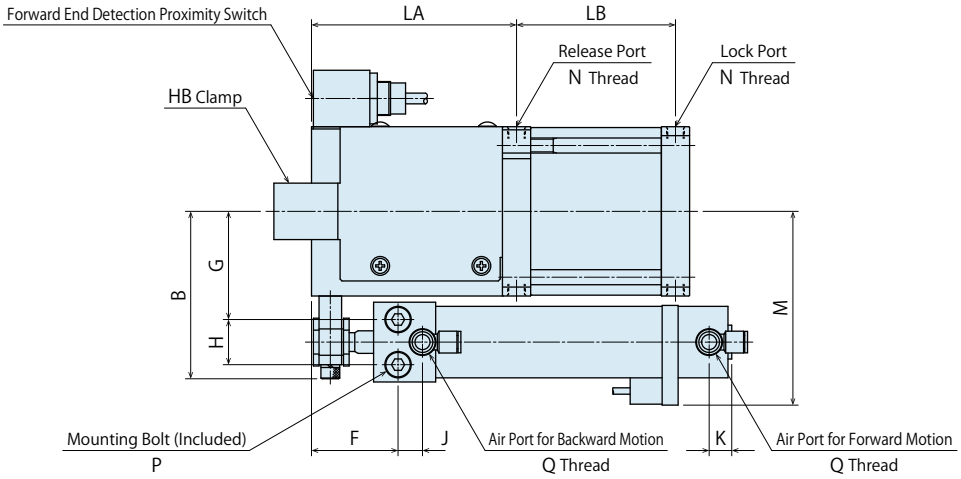
Note:

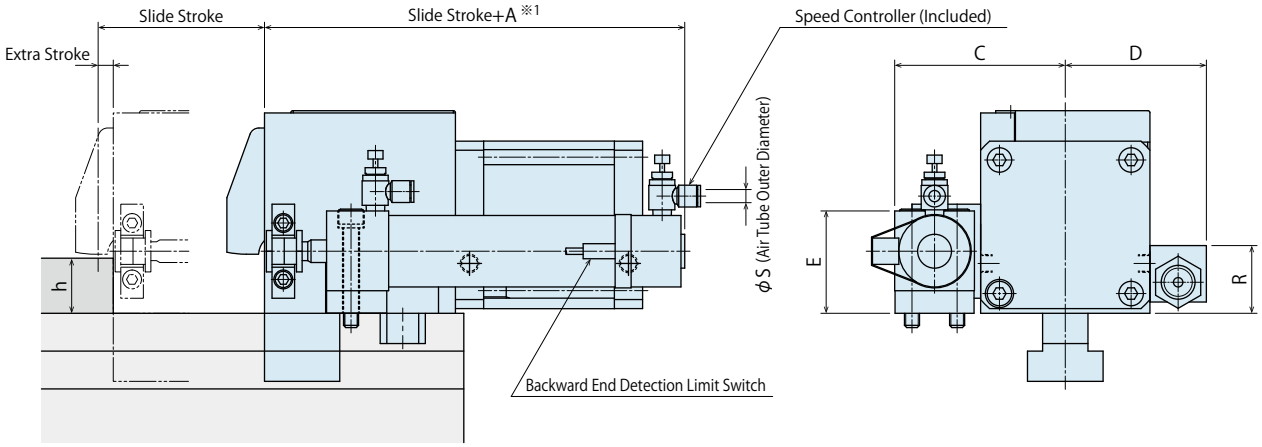
1. The dimensions on the list are for reference.
   The dimensions may differ from specification depending on T-slot (T-leg) dimension.

External Dimensions

※ This drawing shows the standard model of HE Clamp.
Contact us for external dimensions for options.
Please refer to HB Clamp pages (P.11~15) for details of clamp body.

Please refer to P.21 for HE2500.





Notes :

1. Do not exceed the clamp's capacity.
2. Specifications/Contents in this catalog are subject to change without prior notice. Ask for the approval drawing before deciding to purchase.
3. Make sure to keep 2~5 mm of extra stroke when setting the clamp.

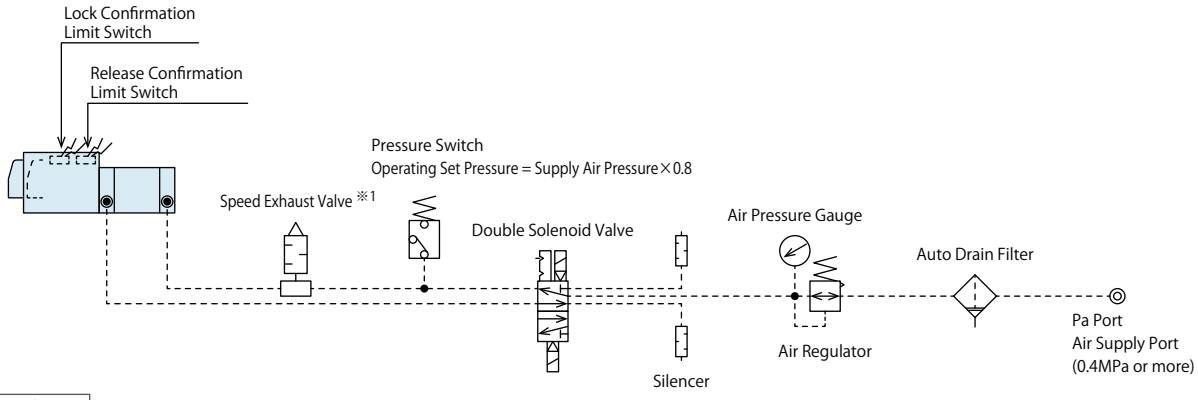
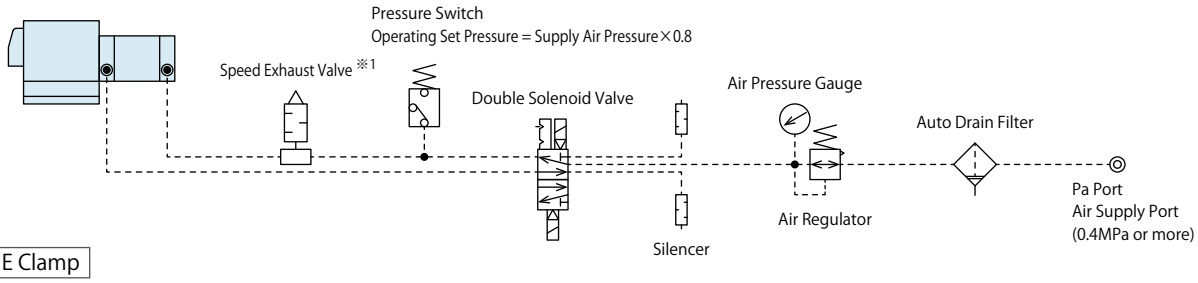
General Operating Circuit Reference

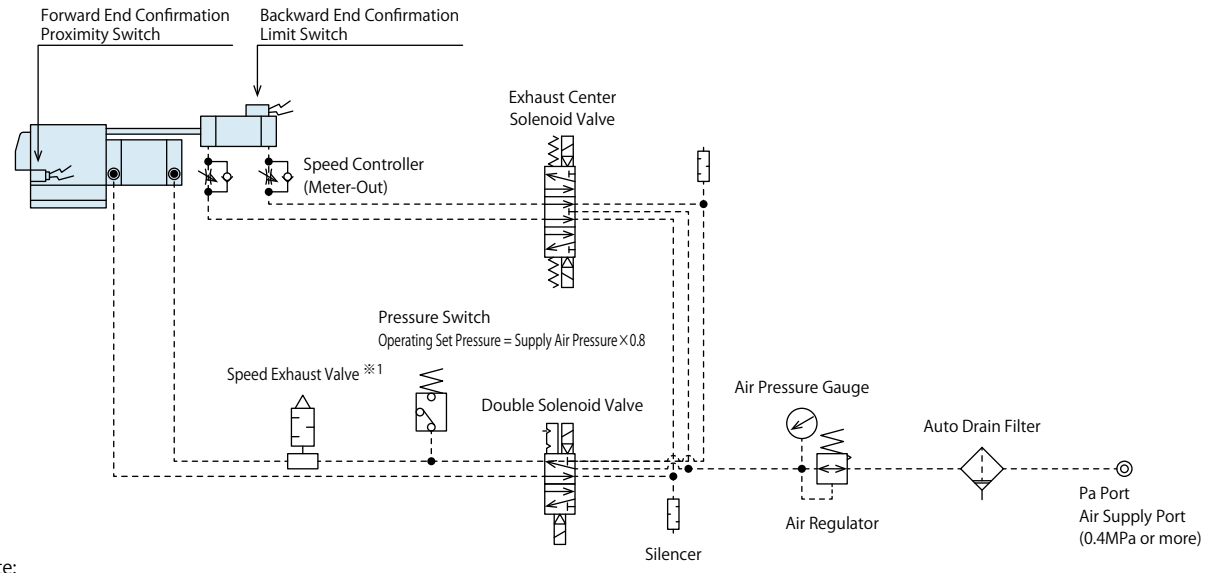
HC Clamp



HB Clamp



HE Clamp

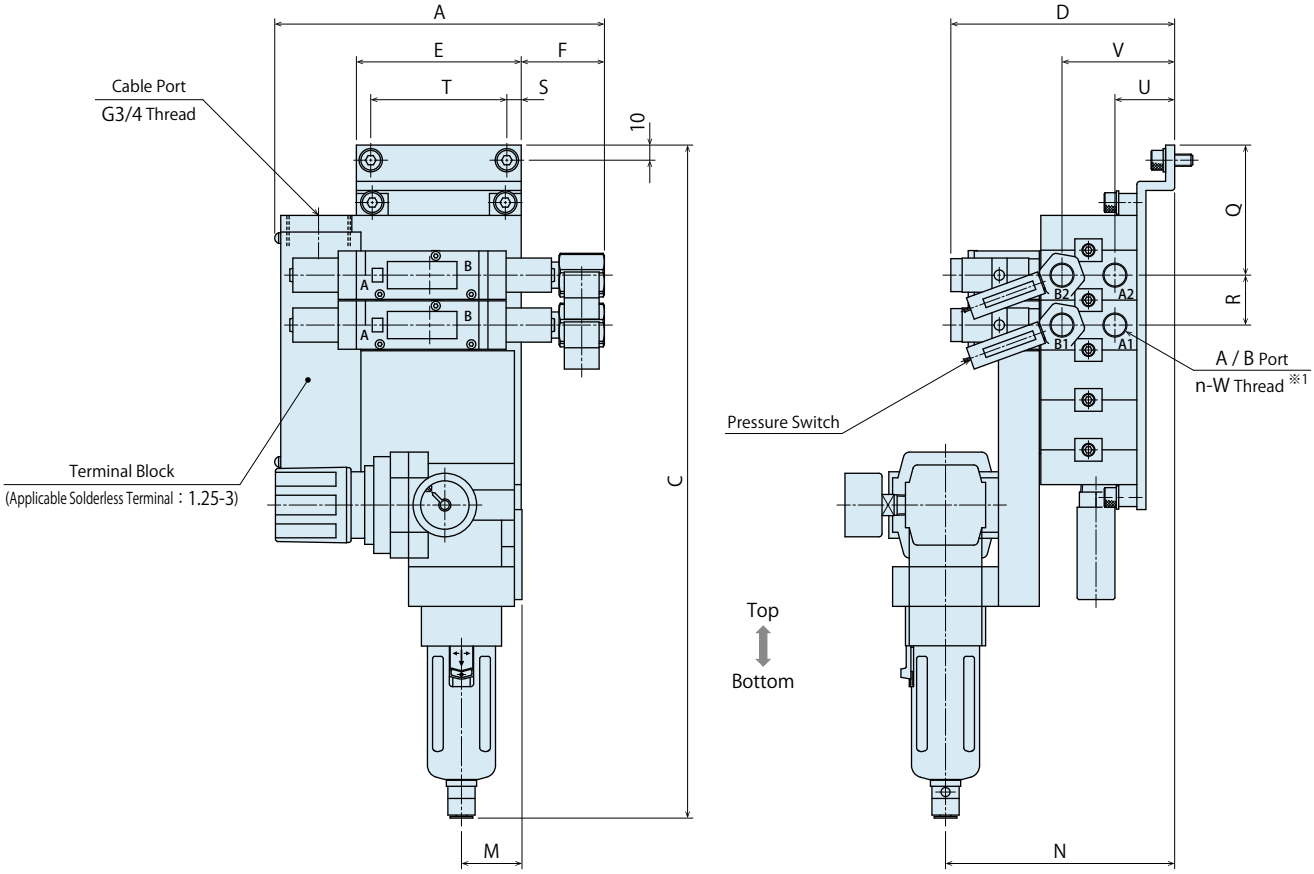


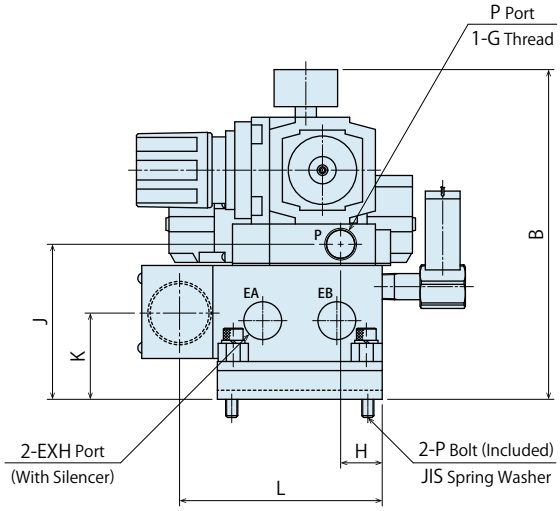
Note:

※1. Speed Exhaust Valve is included in MV7031/ MV7041.
Install it to the place where exhaust is efficient when releasing on lock circuit side.
The circuit symbols are simplified.

External Dimensions

※ This drawing shows MV7011-UU / MV7021-UU / MV7031-UU / MV7041-UU standard model.
Refer to P.27 for external dimensions of MV7051-U.





Notes:

1. Follow the top and bottom directions when mounting.
2. Please supply dry air.
3. Use a stainless steel pipe or nylon tube/hose, etc. for air piping to prevent rust.
4. Releasing time will be longer if piping is long and exhaust efficiency is not well enough.
   Releasing time can be shortened by installing a speed exhaust valve to the circuit.
   Speed exhaust valve is included in MV7031 / MV7041.

Specifications

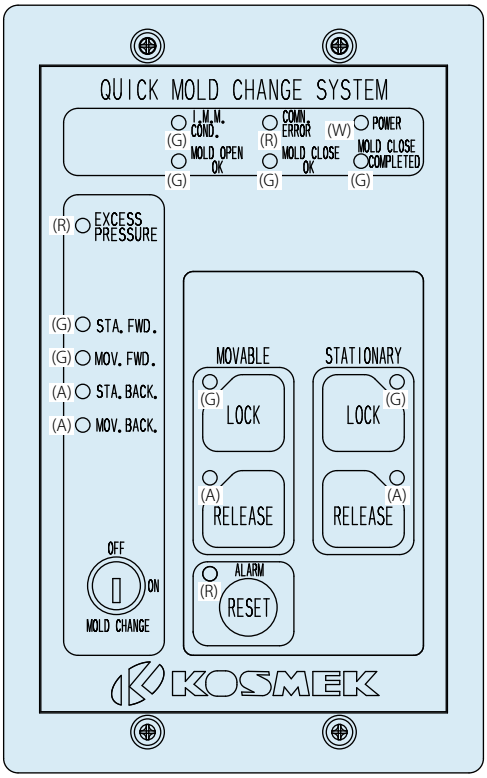
Model No.		YMC□10
Control Panel Operating Voltage		DC24V (Supplied with the attached power supply.)
Attached Power Supply	Input Voltage	AC100V~240V (50/60Hz)
	Output Capacity	30W

Notes :

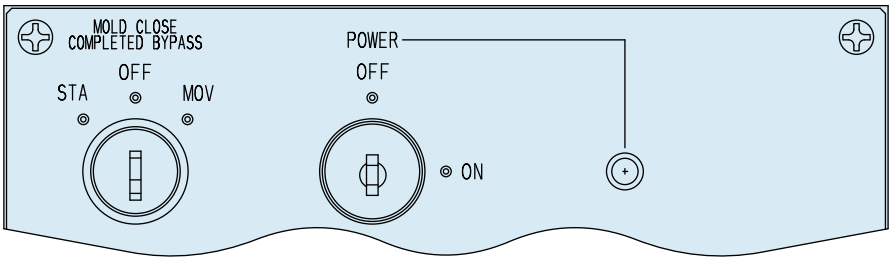
1. Requested specifications other than those written above will be treated as custom made.
2. Signals are sent and received via dry contacts.
3. The molding machine output contact should be for fine current (DC24V / 10mA).
4. The output contact of Operation Panel/Control Unit is DC24V/0.5A.
5. Molding machine terminology may differ depending on the manufacturer.

Detail : Operation Panel

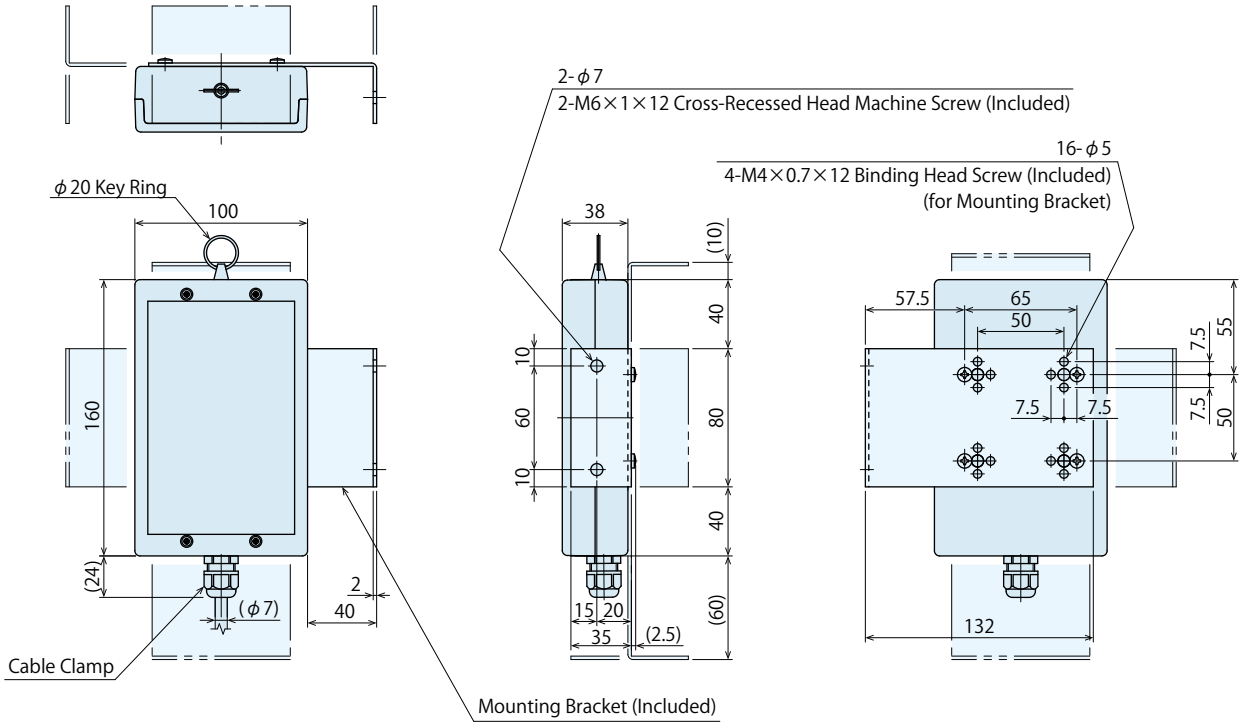
(G) Display Light : Yellow Green
(A) Display Light : Orange
(R) Display Light : Red
(W) Display Light : White



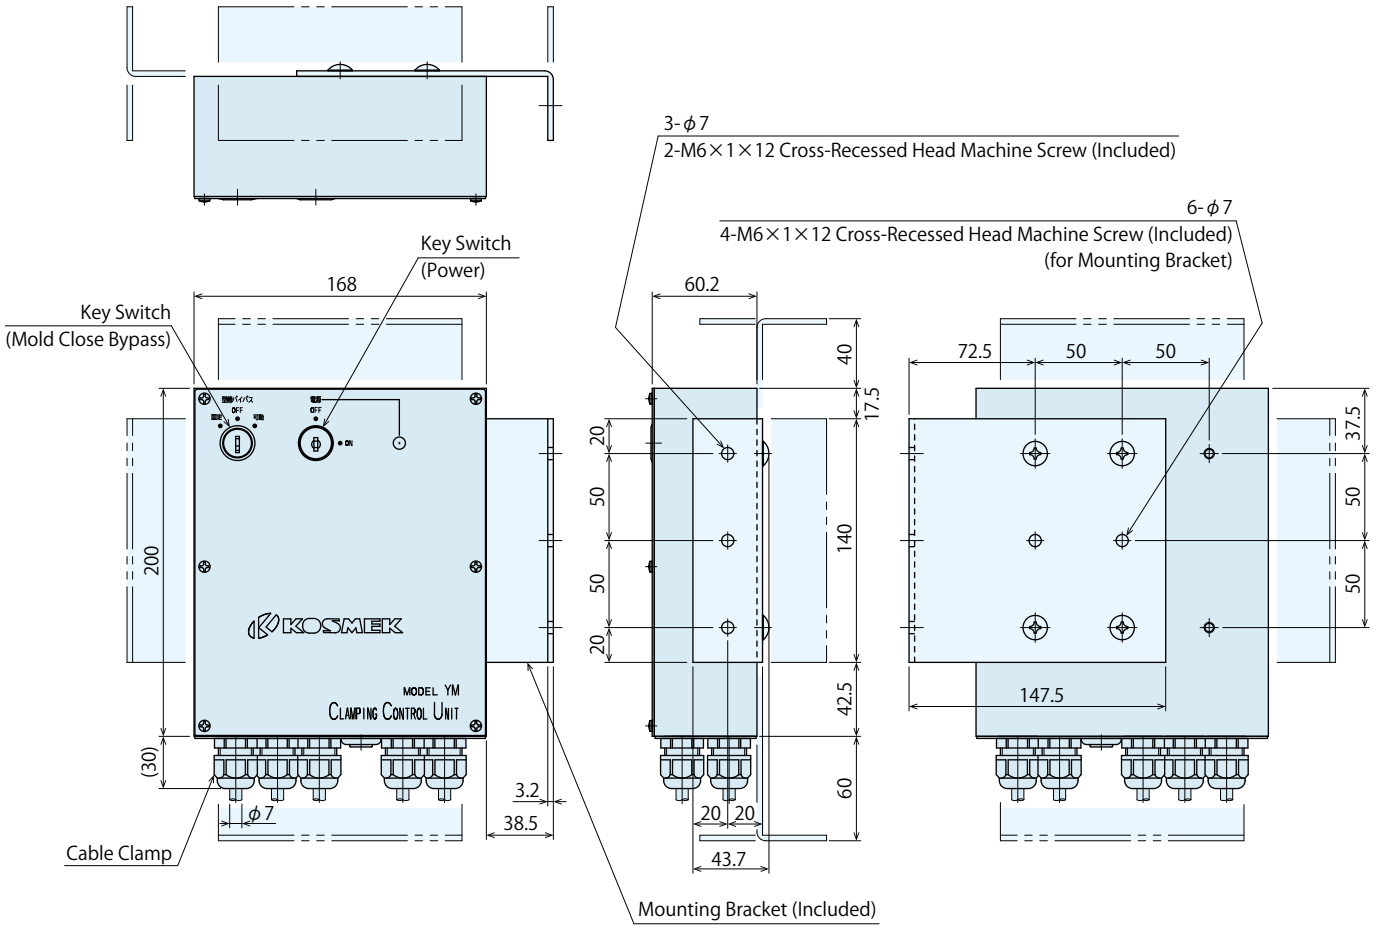
Detail : Control Unit



External Dimensions：Operation Panel



External Dimensions：Control Unit



Note :

1. The bracket can be mounted in any direction.

Operation Procedure : For YMCHE10-V

※ Please contact us for the operation procedure for other models.

Clamp Operating Condition

Injection Molding Machine Condition				Clamp Operation Panel
Operation Mode : Mold Change	Mold Close	Nozzle Back (Option)	Ejector Back (Option)	Mold Change "ON"

Note : 1. When the mold change switch is "ON", clamp error does not occur regardless of the condition of clamps during mold change.

Unloading a Mold

Operation Procedure	Confirmation Items	Cautions
Prepare for mold change.		
Switch the IMM condition to "Nozzle Back" / "Ejector Back" etc. (Input Options)		
Support the mold with the crane.		Confirm the mold is securely hung and cables are not loose.
Switch the IMM to Mold Change Mode.	"IMM COND." light ON. 	
Turn ON the "Mold Change" switch of the clamp operation panel. 		The clamping system controller keys should be carefully controlled by the person in charge.
Close the platens.	"MOLD CLOSE COMPLETED" light ON. 	
Press the [Stationary] and [Movable] "Release" buttons of the clamp operation panel. 	"STA. BWD END" "MOV. BWD END" lights ON.  "RELEASE" lights ON. 	
	"MOLD OPEN OK" light ON.	
Open the platens.		Operate with low speed or inching.
Unload the mold.		Make sure there is no abnormality on clamps and other devices in the platen after unloading the mold.

Loading a Mold

Operation Procedure	Confirmation Items	Cautions
Load the mold with the crane.		Confirm specifications of the mold before loading.
Close the platens.	"MOLD CLOSE COMPLETED" light ON. 	
Press the [Stationary] and [Movable] "Lock" buttons of the clamp operation panel. 	"STA. FWD END" "MOV. FWD END" lights ON.  "LOCK" lights ON. 	
Turn OFF the "Mold Change" switch of the clamp operation panel. 	"Mold Open OK" "Mold Close OK" lights ON.	
Release the mold from crane.		Make sure there is no abnormality on clamps and other devices in the platen.

Interlock Input and Output

※Please contact us for any specifications other than those described below (custom-made).

I. M. M. Output	Contents
Mold Change Mode	A signal that ensures the IMM is in low-speed Mold Change Mode.
Mold Closed (Pressurized)	A signal that ensures the mold is completely closed. Prohibit the release operation while the mold is open to prevent the mold from falling.
Nozzle Back	A signal that ensures the nozzle or the injection unit is fully back to prevent damage to the nozzle when unloading the mold.
Ejector Back	A signal that ensures the ejector is in the back position to prevent damage to the ejector when unloading the mold.

I. M. M. Input	Contents
Mold Open OK	A signal that indicates the clamping system is ready for mold opening.
Mold Close OK	A signal that indicates the clamping system is ready for mold closing.
Mold Change "ON"	A signal that indicates the clamp system is in "Mold Change Mode".
Clamp Error	When an error in the clamp circuit occurs, this signal is sent to make an emergency stop of the machine.
Pressure Request	This signal requests additional hydraulic pressure when necessary to lock or release the clamps in Mold Change Mode.

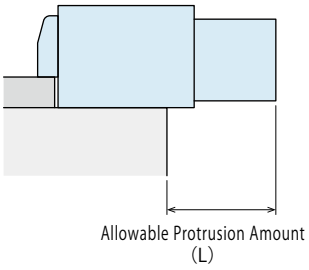
Cautions

Notes for Design

1) Check Specifications
- Please use each product according to the specifications.
- Operate within the specified condition. Failure to do so may result in damage on clamps, falling down of molds and injury.
- The ambient operating temperature of clamp should be 0 ~ 70℃. (High Temperature Model：0 ~ 120℃.)

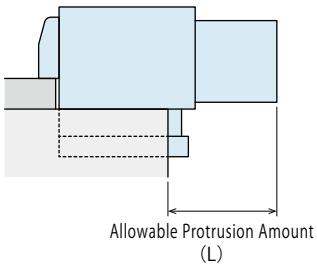
2) Clamping Mold Thickness
- Check the clamping mold thickness.
  Clamping Mold Thickness must be h±0.3mm.
  Use specified molds only. Failure to do so may result in insufficient locking of a mold, mold dropping and injury.

3) Allowable Protrusion Amount of Cylinder
- Do not exceed the allowable protrusion amount. Otherwise, excessive force is applied to the clamp, deforming or dropping the clamp out of T-slot and resulting in falling off of mold and injury.



Allowable Protrusion Amount

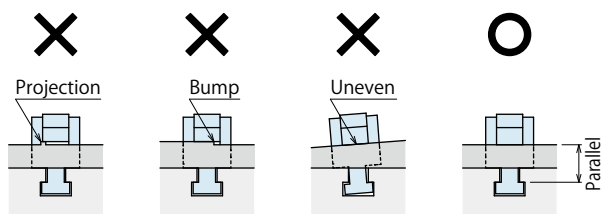
Model No.	L (mm)
HC0103	113
HC0163	119
HC0254	111
HC0404	156
HC0633	179
HC1003	167
HC1603	152
HC2503	190
HC4000	258.5
HC5000	258.5



Allowable Protrusion Amount

Model No.	L (mm)
HB0101/HE0101	108
HB0161/HE0161	113
HB0252/HE0252	122.5
HB0402/HE0402	127.5
HB0632/HE0632	124.5
HB1002/HE1002	133.5
HB1602/HE1602	167
HB2500/HE2500	192

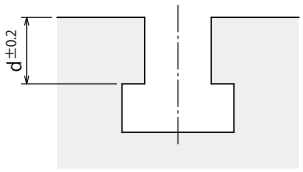
4) Clamping surface must be parallel to the IMM platen.
- If clamping surface is not even or parallel, excessive force is applied to the clamp which deforms or damages the clamp resulting in falling off of the mold and injury.



5) Interlock
- Make sure to control with the interlock so that clamps lock or release only when IMM is at mold close (pressurized) state.

6) Clamp Control【HC Clamp Only】
- HC clamp uses a micro switch of mechanical interface for confirming the lock/release operation. It may happen to disconnect the connection of the switch caused by vibration during the machine running.
  It is recommended to install an off-delay timer in the control circuits of the program.

7) Check Dimension d of T-slot
- Tolerance of dimension d of T-slot should be better than d±0.2mm.



8) Confirm Smooth Forward/Backward Movement of Clamp.
① Supply 0.39MPa or more of air pressure to the air cylinder.
② Adjust the moving speed of the clamp with speed controllers to fully stroke within 1 to 2 seconds.
③ Proximity switch is used for forward-end confirmation. Make sure a mold surface on the switch side has no U-cut.
④ The clamp sliding surface must be smooth (without any bumps).

9) Please supply filtered clean dry air.

Cautions

Installation Notes

1) Please supply filtered clean dry air.
- Install an air filter/air dryer in order to prevent rust and dirt. Otherwise it may lead to malfunction.

2) Procedure before Piping
- The pipeline, piping connector, etc. should be cleaned and flushed thoroughly. The dust and cutting chips in the circuit may lead to fluid leakage and malfunction.
  (There is no filter provided with this product for prevention of contaminants in the air circuit.)

3) Applying Sealing Tape
- Wrap with tape 1 to 2 times following the screwing direction. When piping, be careful that contaminants such as sealing tape do not enter in products. Pieces of the sealing tape can lead to air leaks and malfunction.

4) Mounting the Clamp【HC Clamp Only】
- Use attached hex. socket bolts and tighten it with the torque shown below.

Model No.	Bolt Size	Tightening Torque (N·m)
HC0103	M8×1.25	25
HC0163	M10×1.5	50
HC0254	M12×1.75	80
HC0404	M16×2	200
HC0633	M20×2.5	400
HC1003	M24×3	630
HC1603	M20×2.5	400
HC2503	M24×3	630
HC4000	M30×3.5	1250
HC5000	M33×3.5	1600

5) Mounting the Clamp【HE Clamp Only】
- After setting the clamp in the T-slot, use attached hex. socket bolts and tighten it with the torque shown below.

Model No.	Bolt Size	Tightening Torque (N·m)
HE0101	M5×0.8	6.3
HE0161	M5×0.8	6.3
HE0252	M6×1	10
HE0402	M8×1.25	25
HE0632	M10×1.5	50
HE1002	M12×1.75	80
HE1602	M16×2	200
HE2500	M20×2.5	400

6) Wiring of Forward End Confirmation Switch
- Please wire not to snap the code of the Forward End Confirmation Switch when the clamp moves forward or backward.

Cautions

Notes on Handling

1) Close the mold after molding is completed.
- Failure to do so may result in mold dropping and injury.

2) Do not disassemble or modify the air cylinder.
- Built-in spring is very strong and can be dangerous. If the equipment is taken apart or modified, the warranty will be voided even within the warranty period.

3) It should be handled by qualified personnel.
- The hydraulic/pneumatic equipment should be handled and maintained by qualified personnel.

4) Do not handle or remove the product unless the safety protocols are ensured.

① The machine and equipment can only be inspected or prepared when it is confirmed that the preventive devices are in place.

② Before the product is removed, make sure that the above-mentioned safety measures are in place. Shut off the air of hydraulic source and make sure no pressure exists in the air circuit.

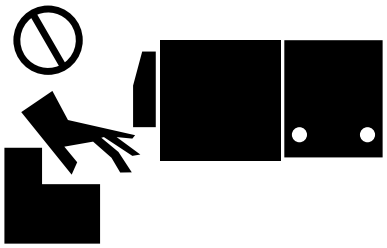
③ After stopping the product, do not remove until the equipment cools down.

④ Make sure there is no abnormality in the bolts and respective parts before restarting the machine or equipment.

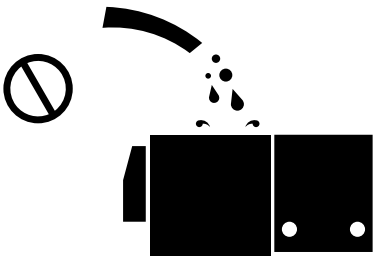
5) Do not apply load on the clamp at 0MPa.
- In case of air source trouble, the clamp has holding force with mechanical lock even when air pressure is at 0MPa. However, do not apply load on the clamp at this state.

6) Do not supply lock and release air pressure simultaneously.
- It leads to damage and decline of the clamp capacity.

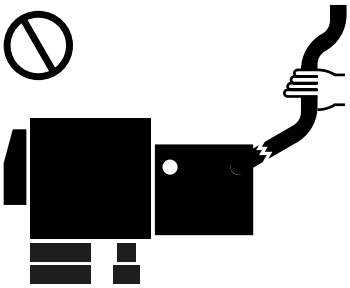
7) Do not touch clamps while they are working.
- Otherwise, your hands may be injured.



8) Do not pour water / oil over the product.
- It may lead to malfunction or deterioration of the product and cause an accident.



9) Please hold the main body of the clamp when removing it.
- If pulling on the air tube, the clamp will fall off leading to injury. Also, the air tube and piping will be damaged leading to air leakage.



Cautions

Maintenance and Inspection

1) Removal of the Product and Shut-off of Pressure Source

- Before the product is removed, make sure that the safety measures mentioned earlier are in place. Shut off the air of hydraulic source and make sure no pressure exists in the air circuit.
  Also make sure there is no abnormality in the bolts and respective parts before restarting.

2) Regularly tighten piping to ensure proper use.

3) Periodically ensure that supply air pressure is a specified value.

4) Make sure to supply filtered clean dry air.

5) Make sure there is smooth action and no abnormal noise. (When the product is restarted after left unused for a long period, make sure it operates properly.)

6) The products should be stored in the cool and dark place without direct sunshine or moisture.

7) Please contact us for overhaul and repair.

Warranty

1) Warranty Period

- The product warranty period is 18 months from shipment from our factory or 12 months from initial use, whichever is earlier.

2) Warranty Scope

- If the product is damaged or malfunctions during the warranty period due to faulty design, materials or workmanship, we will replace or repair the defective part at our expense.
  Defects or failures caused by the following are not covered.

① If the stipulated maintenance and inspection are not carried out.

② If the product is used while it is not suitable for use based on the operator's judgment, resulting in defect.

③ If it is used or handled in inappropriate way by the operator. (Including damage caused by the misconduct of the third party.)

④ If the defect is caused by reasons other than our responsibility.

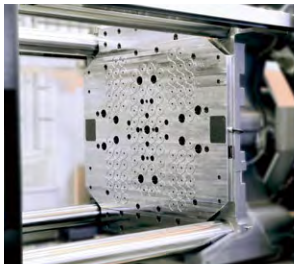
⑤ If repair or modifications are carried out by anyone other than Kosmek, or without our approval and confirmation, it will void warranty.

⑥ Other caused by natural disasters or calamities not attributable to our company.

⑦ Parts or replacement expenses due to parts consumption and deterioration. (Such as rubber, plastic, seal material and some electric components.)

Damages excluding from direct result of a product defect shall be excluded from the warranty.

Magnet Clamp/Air Clamp/Hydraulic Clamp Mold Change System for Small to Extra-Large Injection Molding Machines.



Magnet Clamp System

Ensures safety and securely clamps the mold.

Pneumatic Clamp System

Eco-friendly air operated clamps exert powerful clamping force and are equipped with a mechanical locking system.
40ton / 50ton models have been introduced for extra-large injection molding machines.

Hydraulic Clamp System

Hydraulic clamps have powerful clamping force in a compact body.
Kosmek also offers units that generate hydraulic pressure using only factory air.
