

Hydraulic Link Clamp

- Model LKA
- Model LKC
- Model LKW
- Model LJ/LM
- Model TMA-2
- Model TMA-1

Compact Cylinder with Built-in Link Mechanism

Link design is not required.

Action Description

Released State

Locked State

Application Examples

Machining

Press Fitting

Transfer • Gantry Loader

Interference Prevention

Link Clamp Quick Change Lever Option A

Model **LKA-A / LKC-A / LKW-A / LJ-A / LM-A**

Quickest Lever Setup Time Possible by One Bolt Exchange

● Quick Change Lever Option A is Suitable for Frequent Lever Change

When changing a standard lever, a special tool is required to install/remove a snap ring which fixes the lever pin and rod pin. Installation/Removal of the snap ring takes time and there is a possibility of deformation/loss of the snap ring.

Option A, however, does not require snap rings or special tools, but only one wrench and bolt which is suitable especially for frequent lever change.

● Lever Removal Procedure

Loosen the bolt on the cover top and remove the cover.
(The bolt does not fall from the cover.)

Pull out the rod pin and the lever pin, and remove the cover.

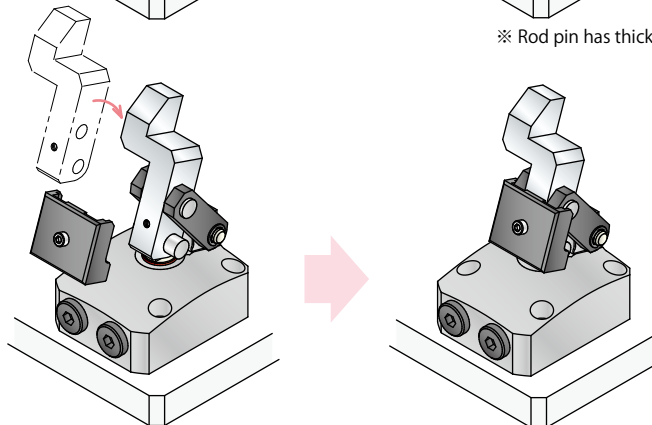

※ Rod pin has thicker flange.

● Lever Installation Procedure

Set another lever and insert the rod pin and the lever pin. (The pins can also be inserted from the other side.)

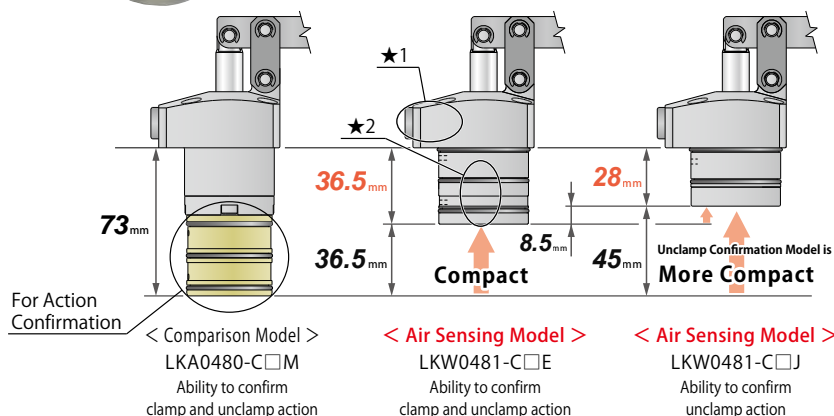

Set the cover and tighten the bolt.
Lever installation is now completed.

Air Sensing Link Clamp

Model **LKW**

Clamp-unclamp confirmation with built-in air catch sensor for smaller footprint fixtures.

● **Action Description**

When releasing

Perform the release action by supplying hydraulic pressure to release port.

When locking

Perform the lock action by supplying hydraulic pressure to lock port.

● **Lever in Three Directions Available**

Lever positioning is available in three directions; L: Left, C: Center, R: Right. As seen from the port side.

● **Excellent Coolant Resistance**

Our exclusive dust seal is designed to protect against high pressure coolant. It also has high durability against chlorine-based coolant by using a sealing material with excellent chemical resistance.

● **Able to Attach Speed Control Valve Directly**

When fitting the gasket (Piping Option -C), it is able to attach the speed control valve with air venting function. (Speed control valve is sold separately.)

Notes :

1. Tables and graphs show the relationship between the clamping force (kN) and supply hydraulic pressure (MPa).
 2. Cylinder force (when L=0) cannot be calculated from the calculation formula of clamping force.
 3. Clamping force in the non-usable range may cause damage and fluid leakage.
- ※1. F : Clamping Force (kN), P : Supply Hydraulic Pressure (MPa), L : Lever Length (mm).

TMA1600-2		Clamping Force Calculation Formula ※1 (kN) $F = (16.63 \times P) / (L - 30)$

Allowable Offset Graph

Applicable Model

Double-Acting Model

TMA 0 - 2 B C L C R

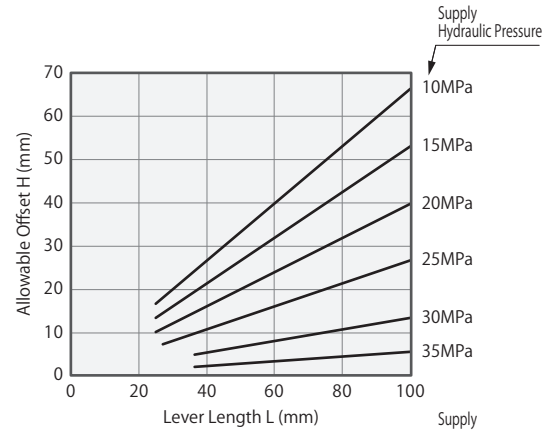

1 Body Size

(Ex.) In case of TMA1600 :

When supply hydraulic pressure P is 30MPa and lever length L is 140mm, allowable offset becomes about 20mm.

TMA0250-2

Notes :

1. Tables and graphs show the relationship between the lever length and the allowable offset according to the supply hydraulic pressure.
2. Using the lever beyond allowable offset may cause deformation, seizure and fluid leakage etc.
3. The tables and graphs are only for reference. The design should be carried out with allowance fully taken into consideration.

External Dimensions

C : Gasket Option (With G Thread Plug)
 ※The drawing shows the locked state of TMA-2CC.

Notes :

- ※1. Flange inclination angle is 12° only for TMA1000.
- ※2. Mounting bolts are not provided. Please prepare them according to the mounting height referring to dimension 'S'.
 1. Please use the provided pin (equivalent to φADf6, φAEf6, HRC60) as mounting pin for lever.
 2. Please prepare speed control valve (Refer to P.947) if necessary.

Machining Dimensions of Mounting Area

Notes :

- ※3. CA tapping depth of the mounting bolt should be decided according to the mounting height referring to dimension 'S'.
- ※4. The depth of the body mounting hole φD should be decided according to the mounting height referring to dimension 'F'.
- ※5. The machining dimension is for -C : Gasket option.

Piping Method

B : Piping Option (G Thread)
 ※The drawing shows the locked state of TMA-2BC.

Notes :

1. Please design the link lever length according to the performance curve.
2. If the link lever is not in accordance with the dimension shown above, performance may be degraded and damage can occur.
3. Please use the attached pin (equivalent to φADf6, φAEf6, HRC60) as the mounting pin for lever.
(Please refer to each external dimension of TMA for the dimensions φAD and φAE.)

Cautions

● Notes for Design

- 1) Check Specifications
 - Please use each product according to the specifications.
- 2) Notes for Circuit Design
 - Please read "Notes on Hydraulic Cylinder Speed Control Unit" for proper hydraulic circuit design. Improper circuit design may lead to malfunctions and damages. (Refer to P.1356)
 - Ensure there is no possibility of supplying hydraulic pressure to the lock port and the release port simultaneously.
- 3) Notes for Link Lever Design
 - Make sure no force is applied to the piston rod except from the axial direction. The usage like the one shown in the drawing below will apply a large bending stress to the piston rod and must be avoided.

- If offset load is applied on the link part, use it within the allowable range of "Allowable Offset Graph".
- 4) Protect the exposed area of the piston rod when using on a welding fixture.
 - If spatter attaches to the sliding surface it could lead to malfunction and fluid leakage.
 - 5) When clamping on a sloped surface of the workpiece
 - Make sure the clamping surface and the mounting surface of the clamp are parallel.

- 6) When using in a dry environment
 - The link pin can be dried out. Grease it periodically or use a special pin. Contact us for the specifications of special pins.
- 7) Notes for LKA-M/N, LKW
 - When using air sensing link clamp (LKA-M/N, LKW), make sure to check the Notes for Design · Installation · Use (Pages shown below).
 - Link clamp with air sensing option LKA-M/N : Refer to P.633.
 - Link clamp with air sensing valve LKW : Refer to P.655.

● Installation Notes

- 1) Check the Usable Fluid
 - Please use the appropriate fluid by referring to the Hydraulic Fluid List (P.1355).
- 2) Installation of the Product
 - When mounting the clamp, use hexagonal socket bolts as multiple bolt holes for mounting (with tensile strength of 12.9) and tighten them with the torque shown in the table below. Tightening with greater torque than recommended can dent the seating surface or break the bolt.

	Model No.	Thread Size	Tightening Torque (N·m)
LKA LKC LKW	LKA0360	M4×0.7	4.0
	LKA0400	M5×0.8	8.0
	LKC0400/LKW0401		
	LKA0480	M5×0.8	8.0
	LKC0480/LKW0481		
	LKA0550	M6×1	14
	LKC0550/LKW0551		
	LKA0650	M6×1	14
	LKC0650/LKW0651		
	LKA0750/LKW0751	M8×1.25	33
LKA0900	M10×1.5	65	
LKA1050	M12×1.75	114	
LJ/LM	LJ0302/LM0300	M4×0.7	3.2
	LJ0362/LM0360	M4×0.7	3.2
	LJ0402/LM0400	M5×0.8	6.3
	LJ0482/LM0480	M5×0.8	6.3
	LJ0552/LM0550	M6×1	10
	LJ0652/LM0650	M6×1	10
	LJ0752/LM0750	M8×1.25	25
	LJ0902	M10×1.5	58.8
LJ1052	M12×1.75	98	
TMA	TMA0250	M5×0.8	6.9
	TMA0400	M5×0.8	6.9
	TMA0600	M6×1	11.8
	TMA1000	M8×1.25	25
	TMA1600	M10×1.5	58.8
	TMA2500	M12×1.75	98
TMA3200	M12×1.75	98	

3) Installation / Removal of the Link Lever

- When inserting the link pin, do not hit the pin directly with a hammer. When using a hammer to insert the pin, always use a cover plate with a smaller diameter than the spring ring groove on the pin.

- The following shows the tightening torque for the mounting bolt of the quick change lever option A.

Quick Change Lever Option A

Model No.	Thread Size	Tightening Torque (N·m)
LKA0360-□□-A LJ0362-□□-A / LM0360-□□-A	M3×0.5	1.3
LKA0400-□□-A LKC0400-□□-A / LKW0401-□□-A LJ0402-□□-A / LM0400-□□-A	M3×0.5	1.3
LKA0480-□□-A LKC0480-□□-A / LKW0481-□□-A LJ0482-□□-A / LM0480-□□-A	M3×0.5	1.3
LKA0550-□□-A LKC0550-□□-A / LKW0551-□□-A LJ0552-□□-A / LM0550-□□-A	M3×0.5	1.3
LKA0650-□□-A LKC0650-□□-A / LKW0651-□□-A LJ0652-□□-A / LM0650-□□-A	M4×0.7	3.2
LKA0750-□□-A / LKW0751-□□-A LJ0752-□□-A / LM0750-□□-A	M4×0.7	3.2
LKA0900-□□-A	M5×0.8	6.3
LKA1050-□□-A	M5×0.8	6.3

4) Notes on dual rod option (-D) for dog application.

- When attaching dog, set up the piston so that it will not turn around. Please secure the dog or cam and prevent any rotation or torque on the piston rod. Tightening torque of mounting screw is shown in the table below.

Model No.	Thread Size	Tightening Torque (N·m)
LKA0360-□□D	M4×0.7	3.2
LKA0400-□□D	M6×1	10
LKA0480-□□D	M8×1.25	25
LKA0550-□□D	M8×1.25	25
LKA0650-□□D	M8×1.25	25
LKA0750-□□D	M10×1.5	50
LKA0900-□□D	M10×1.5	50
LKA1050-□□D	M10×1.5	50

5) Speed Adjustment

- Adjust the speed so that the total operating time is one second or more. If the clamp operates too fast the parts will be worn out leading to premature damage and ultimately complete equipment failure.
- Please make sure to release air from the circuit before adjusting speed. It will be difficult to adjust the speed accurately with air mixed in the circuit.
- Turn the speed control valve gradually from the low-speed side (small flow) to the high-speed side (large flow) to adjust the speed.

※ Please refer to P.1355 for common cautions. • Installation Notes • Hydraulic Fluid List • Notes on Hydraulic Cylinder Speed Control Circuit • Notes on Handling • Maintenance/Inspection • Warranty

● Cautions

● Installation Notes (For Hydraulic Series)

- 1) Check the Usable Fluid
 - Please use the appropriate fluid by referring to the Hydraulic Fluid List.
- 2) Procedure before Piping
 - The pipeline, piping connector and fixture circuits should be cleaned by thorough flushing.
 - The dust and cutting chips in the circuit may lead to fluid leakage and malfunction.
 - There is no filter provided with Kosmek's product except for a part of valves which prevents foreign materials and contaminants from getting into the circuit.
- 3) Applying Sealing Tape
 - Wrap with tape 1 to 2 times following the screw direction.
 - Pieces of the sealing tape can lead to oil leakage and malfunction.
 - Please implement piping construction in a clear environment to prevent anything getting in products.
- 4) Air Bleeding of the Hydraulic Circuit
 - If the hydraulic circuit has excessive air, the action time may become very long. If air enters the circuit after connecting the hydraulic port or under the condition of no air in the oil tank, please perform the following steps.
 - ① Reduce hydraulic pressure to less than 2MPa.
 - ② Loosen the cap nut of pipe fitting closest to the clamp by one full turn.
 - ③ Shake the pipeline to loosen the outlet of pipe fitting.
Hydraulic fluid mixed with air comes out.

- ④ Tighten the cap nut after bleeding.
- ⑤ It is more effective to release air at the highest point inside the circuit or at the end of the circuit.
(Set an air bleeding valve at the highest point inside the circuit.)

5) Checking Looseness and Retightening

- At the beginning of the machine installation, the bolt and nut may be tightened lightly. Check the looseness and re-tighten as required.

Matsumura Oil	Hydol AW-32	
Castrol	Hyspin AWS 32	

Note : Please contact manufacturers when customers require products in the list above.

● Notes on Hydraulic Cylinder Speed Control Unit

Please pay attention to the cautions below. Design the hydraulic circuit for controlling the action speed of hydraulic cylinder. Improper circuit design may lead to malfunctions and damages. Please review the circuit design in advance.

● Flow Control Circuit for Single Acting Cylinder

For spring return single acting cylinders, restricting flow during release can extremely slow down or disrupt release action. The preferred method is to control the flow during the lock action using a valve that has free-flow in the release direction. It is also preferred to provide a flow control valve at each actuator.

Accelerated clamping speed by excessive hydraulic flow to the cylinder may sustain damage. In this case add flow control to regulate flow. (Please add flow control to release flow if the lever weight is put on at the time of release action when using swing clamps.)

● Flow Control Circuit for Double Acting Cylinder

Flow control circuit for double acting cylinder should have meter-out circuits for both the lock and release sides. Meter-in control can have adverse effect by presence of air in the system.

However, in the case of controlling LKE, TMA, TLA, both lock side and release side should be meter-in circuit.

Refer to P.75 for speed adjustment of LKE.

For TMA and TLA, if meter-out circuit is used, abnormal high pressure is created, which causes oil leakage and damage.

【Meter-out Circuit】 (Except LKE/TMA/TLA)

【Meter-in Circuit】 (LKE/TMA/TLA must be controlled with meter-in.)

In the case of meter-out circuit, the hydraulic circuit should be designed with the following points.

- ① Single acting components should not be used in the same flow control circuit as the double acting components. The release action of the single acting cylinders may become erratic or very slow.

Refer to the following circuit when both the single acting cylinder and double acting cylinder are used together.

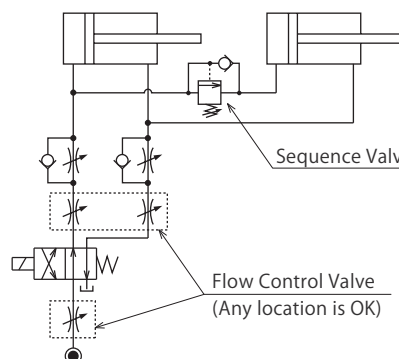

- Separate the control circuit.

- Reduce the influence of double acting cylinder control unit. However, due to the back pressure in tank line, single action cylinder is activated after double action cylinder works.

- ② In the case of meter-out circuit, the inner circuit pressure may increase during the cylinder action because of the fluid supply. The increase of the inner circuit pressure can be prevented by reducing the supplied fluid beforehand via the flow control valve. Especially when using sequence valve or pressure switches for clamping detection. If the back pressure is more than the set pressure then the system will not work as it is designed to.

ⓘ Cautions

● Notes on Handling

- 1) It should be operated by qualified personnel.
 - The hydraulic machine and air compressor should be operated and maintained by qualified personnel.
- 2) Do not operate or remove the product unless the safety protocols are ensured.
 - ① The machine and equipment can only be inspected or prepared when it is confirmed that the safety devices are in place.
 - ② Before the product is removed, make sure that the above-mentioned safety devices are in place. Shut off the pressure and power source, and make sure no pressure exists in the air and hydraulic circuits.
 - ③ After stopping the product, do not remove until the temperature drops.
 - ④ Make sure there is no abnormality in the bolts and respective parts before restarting the machine or equipment.
- 3) Do not touch a clamp (cylinder) while it is working. Otherwise, your hands may be injured due to clinching.

- 4) Do not disassemble or modify.
 - If the equipment is taken apart or modified, the warranty will be voided even within the warranty period.

● Maintenance and Inspection

- 1) Removal of the Machine and Shut-off of Pressure Source
 - Before the machine is removed, make sure that safety devices and preventive devices are in place. Shut off the pressure and power source, and make sure no pressure exists in the air and hydraulic circuits.
 - Make sure there is no abnormality in the bolts and respective parts before restarting.
- 2) Regularly clean the area around the piston rod and plunger.
 - If it is used when the surface is contaminated with dirt, it may lead to packing seal damage, malfunctioning and fluid leakage.

- 3) Please clean out the reference surfaces on a regular basis (taper reference surface and seating surface) of the locating products. (VS/VT/VFL/VFM/VFJ/VFK/WVS/VWM/VWK/VX/VXE/VXF)
 - The locating products, except VX/VXE/VXF model, can remove contaminants with cleaning functions. However, hardened cutting chips, adhesive coolant and others may not be removed. Make sure there are no contaminants before installing a workpiece/pallet.
 - Continuous use with contaminant on components will lead to locating accuracy failure, malfunction and fluid leakage.

- 4) If disconnecting by couplers, air bleeding should be carried out on a regular basis to avoid air mixed in the circuit.
- 5) Regularly tighten nut, bolt, pin, cylinder, pipe line and others to ensure proper use.
- 6) Make sure the hydraulic fluid has not deteriorated.
- 7) Make sure there is a smooth action without an irregular noise.
 - Especially when it is restarted after left unused for a long period, make sure it can be operated correctly.
- 8) The products should be stored in the cool and dark place without direct sunshine or moisture.
- 9) Please contact us for overhaul and repair.

● Warranty

1) Warranty Period

- The product warranty period is 18 months from shipment from our factory or 12 months from initial use, whichever is earlier.

2) Warranty Scope

- If the product is damaged or malfunctions during the warranty period due to faulty design, materials or workmanship, we will replace or repair the defective part at our expense. Defects or failures caused by the following are not covered.

- ① If the stipulated maintenance and inspection are not carried out.
- ② If the product is used while it is not suitable for use based on the operator's judgment, resulting in defect.
- ③ If it is used or operated in an inappropriate way by the operator. (Including damage caused by the misconduct of the third party.)
- ④ If the defect is caused by reasons other than our responsibility.
- ⑤ If repair or modifications are carried out by anyone other than Kosmek, or without our approval and confirmation, it will void warranty.
- ⑥ Other caused by natural disasters or calamities not attributable to our company.
- ⑦ Parts or replacement expenses due to parts consumption and deterioration. (Such as rubber, plastic, seal material and some electric components.)

Damages excluding from direct result of a product defect shall be excluded from the warranty.

Control Method	Meter-in	
G Thread Size	G1/8A	G1/4A
Cracking Pressure MPa	0.04	
Max. Passage Area mm ²	2.6	5.0
Usable Fluid	General Hydraulic Oil Equivalent to ISO-VG-32	
Operating Temperature °C	0 ~ 70	
Tightening Torque for Main Body N·m	10	25
Weight g	12	26

- Notes :
1. It must be mounted with recommended torque. Because of the structure of the metal seal, if mounting torque is insufficient, the flow control valve may not be able to adjust the flow rate.
 2. Do not attach a used BZT to other clamps.
Flow control will not be made because the bottom depth difference of G thread makes metal seal insufficient.

				TMA1000-2C□	TMA1000-1C□
BZT0201-A	TLA2001-2C□□	TLB2001-2C□□	TLA2002-1C□	TMA1600-2C□	TMA1600-1C□
	TLA2501-2C□□	TLB2501-2C□□	TLA2502-1C□	TMA2500-2C□	TMA2500-1C□
	TLA4001-2C□□	TLB4001-2C□□	TLA4002-1C□	TMA3200-2C□	TMA3200-1C□

- Notes :
1. It is not recommended to use BZT for TL□040□ / TL□060□ since they have small cylinder capacity and it is difficult to adjust the speed.
 2. In case of controlling TMA, TLA, both lock side and release side should be meter-in circuit.
If meter-out circuit is used, abnormal high pressure is created, which causes oil leakage and damage.

T	8.7	11.5
U	G1/8	G1/4
V	2.5 ~ 3.5	3.5 ~ 4.5
W	2.5 ~ 5	3.5 ~ 7

Notes :

1. Since the $\nabla\nabla\nabla$ area is sealing part, be careful not to damage it.
2. Since the $\nabla\nabla$ area is the metal sealing part of BZL, be careful not to damage it. (Especially when deburring)
3. No cutting chips or burr should be at the tolerance part of machining hole.
4. As shown in the drawing, P1 port is used as the hydraulic supply side and P2 port as the clamp side.

Notes

1. Please read "Notes on Hydraulic Cylinder Speed Control Unit" for proper hydraulic circuit design.
Improper circuit design may lead to malfunctions and damages. (Refer to P.1356)
2. It is dangerous to release the air under high pressure. It must be done under lower pressure.
(For reference : the minimum operating range of the product within the circuit.)
3. When the cylinder capacity is small, the speed of flow may not be controlled properly. (Recommended Cylinder Capacity : 3cm³ or more)

● Specifications

Model No.	JZG010	JZG020	JZG030	
Max. Operating Pressure	MPa 35			
Withstanding Pressure	MPa 42			
G Thread Size	G1/8A	G1/4A	G3/8A	
Usable Fluid	General Hydraulic Oil Equivalent to ISO-VG-32			
Operating Temperature	°C 0 ~ 70			
Tightening Torque for Main Body N·m	Female Thread Side Material : Steel	10	25	35
	Female Thread Side Material : Aluminum (For LT/LM※1)	8	20	28
Weight	g 7	15	23	

- Notes :
1. Air bleeding under high pressure is dangerous. It must be done under lower pressure.
(For reference : the minimum operation pressure range of the product within the circuit)
 2. Refer to the machining dimensions of BZL mounting area when installing JZG into a hydraulic circuit.
- ※1. Body material of LT/LM is aluminum alloy, so install it with the tightening torque for aluminum.

Manifold Block for DP

Model No. Indication

※The drawing below shows DZ□0-MG□ (Gasket option).

※The drawing below shows DZ□0-MS□ (Piping option).

Notes :

- Material :S45C Surface Finishing :Alkaline Blackening
- G option: the R-thread plug is screwed in at shipment. There is variance in protrusion amount of the plug.
- Plug is not included in the S option.
- Recommended hole size for a hydraulic pressure supply port drilled by Customer.
Make sure there are no burrs around the connection and no cutting chips or other foreign substances inside.
- The surface touching the O-ring should have a roughness of $\sqrt{6.35}$.
